Cut at 7” and then fold in half. This is just a one fold brochure...so the third column is cut off and not used.
Pedestrian signals consist of the illuminated words WALK (or symbolic person) and DONT WALK (or symbolic hand). The meanings of the indications are as follows:

- A steady, WALK or symbolic person display means that a pedestrian may enter the roadway and proceed in the direction of the indication.
- A flashing, DONT WALK or symbolic hand display means that a pedestrian may not start to cross the roadway in the direction of the indication, but that the pedestrian who has partly completed crossing during the steady WALK may continue crossing.
- A steady DONT WALK display means that a pedestrian cannot legally start crossing the roadway.

There are two types of pedestrian signals; those with pedestrian detectors (Push to Walk buttons) and those without detection. When pedestrian detectors are present, they must be pushed to receive a "WALK" signal. When pedestrian detectors are absent, pedestrian signals consist of the illuminated words WALK or symbolic person and DONT WALK (or symbolic hand). The meanings of the indications are as follows:

- A steady WALK signal means that a pedestrian may start to cross the roadway.
- A steady DONT WALK signal means that a pedestrian cannot legally start to cross the roadway.

Pedestrian signals assign right of way to pedestrians when the signal is green. Pedestrians still have to exercise sound judgement when crossing a roadway. The following suggestions are offered in the interest of safety:

- **Before crossing a signalized intersection**, push the pedestrian detector if one is present. Begin your crossing when the WALK indication appears. Don't panic when the indication turns to flashing DONT WALK - there is still adequate time to complete crossing before opposing traffic is released.

- If no pedestrian signal is available, **ALWAYS** cross at the beginning of the green traffic signal display.

- **Before crossing a non-signalized roadway**, exercise caution when crossing the street. The following suggestions are offered:
  - Push the pedestrian detector if one is present. Begin your crossing when the WALK indication appears. Don't panic when the indication turns to flashing DONT WALK.
  - When there is still adequate time to complete crossing before opposing traffic is released, push the pedestrian detector if one is present. Begin your crossing when the WALK signal appears.

- When pedestrian signals are not present, **ALWAYS** be attentive and watch for vehicles turning across your path. By law, vehicles have to yield to pedestrians lawfully within the intersection. However, they may not start to cross the roadway in the direction of the indication. Begin your crossing during the steady WALK signal.

- **If no pedestrian signal is available**, cross at the beginning of the green traffic signal display. If no pedestrian signal is available, **ALWAYS** cross at the beginning of the green traffic signal display. If no pedestrian signal is available, **ALWAYS** cross at the beginning of the green traffic signal display.
