The Kansas Airport System
There is a strong relationship between Kansas’ economy and aviation. The state’s system of seven commercial service and 73 general aviation airports, listed in the National Plan of Integrated Airports System (NPIAS), provide the gateway to the nation’s air transportation system and the world’s economy. Airports support the Kansas economy by increased efficiency and productivity for all business activity, including the transportation of passengers for both recreational and business purposes. Airports are important economic catalysts, supporting thousands of jobs and billions of dollars in economic activity. Most of Kansas’ largest employers – both large and small – rely on the state’s aviation system to transport employees, customers, supplies, and products. Kansas’ 80 NPIAS airports serve as the base of operations for a variety of businesses, including airlines, air cargo companies, flight instructors, charters, concessionaries, government entities, and many others. Kansas tourism industry also depends on the state’s system of airports to accommodate thousands of visitors each year.

Study Process
The Kansas Department of Transportation, Division of Aviation, implemented this study through a Federal Aviation Administration (FAA) grant, to quantify the economic impact and relationship between the state’s system of airports and the economy. The study follows an approved methodology that has successfully quantified the value of airports and airport systems throughout the United States.

The economic contribution of each NPIAS airport in Kansas was measured in terms of employment, payroll, and output. A comprehensive survey process was used to calculate the direct economic benefits related to on-airport businesses and government agencies, including the indirect benefits associated with visitor-related expenditures. Secondary, or induced, impacts from these airport activities were calculated using economic models specific to Kansas. For example, when an airport employee purchases goods and services, those dollars circulate through the local economy which results in additional economic activity in the region. The total economic impact is the sum of all direct, indirect, and multiplier impacts.

Statewide Impacts
Based on information gathered during the study, approximately 91,000 jobs are attributed to the aviation industry, including 42,000 from Aerospace Manufacturing. These employees receive more than $4.4 billion in total payroll, and generate more than $20.5 billion in total economic activity. In addition, the 80 NPIAS airports in Kansas provide a number of health, welfare, and safety benefits, including aerial agricultural spraying, medical transport and evacuation, emergency response, search and rescue, flight training, law enforcement, wildlife management, military training, search and rescue operations, and education.

Kansas’ Total Annual Economic Benefits from Aviation

| Total Jobs   | 91,279 |
| Total Payroll| $4.4 Billion |
| Total Output | $20.6 Billion |

Impact Measures

Employment measures the number of full-time equivalent (FTE) jobs related to airport activity including on-airport construction. A part-time employee counts as half a full-time employee.

Payroll measures the total annual wages and benefits paid to all workers whose salaries are directly attributable to airport activity.

Economic Activity (Output) measures the value of goods and services related to airports in Kansas. The output from on-airport business activity is assumed to be the sum of annual gross sales and average annual capital expenditures.
Burlington-Coffey County Airport (UKL) is located approximately 11 miles north of the Burlington central business district. Burlington is the county seat and most populous city in Coffey County.

The airport is included in the FAA’s National Plan of Integrated Airport Systems (NPIAS), making it eligible to receive federal funds. Owned and operated by Coffey County, the airport’s role within the Kansas Aviation System Plan is identified as a Business airport, which is intended to accommodate local business activities and general aviation users.

The airport has a single 5,500-foot concrete runway with non-precision instrument approaches to each end.

The county provides fuel services, aircraft parking, hangar storage, as well as aircraft maintenance and repair to airport users. The airport is most frequently used for flight training and aerial pipeline and power line inspection flights.

Wolf Creek Nuclear Power Plant is located nearby and uses the airport to fly in parts for upkeep and maintenance. McElwain Sprayers also based their operation here to provide aerial application services to local farmers.

The airport also supports a number of other important flights such as law enforcement, emergency medical evacuation and patient transfer, medical doctor transport, and access for sportsmen flying in during hunting season.

The local community benefits from the presence of the airport through nonbusiness related functions as well. The airport hosts an annual flight camp where children participate in activities that educate them on aviation, airports, and aircraft, followed by a brief airplane ride.

Each year, the airport also hosts two fly-ins attracting as many as 1,200 spectators.

**Impact Types**

- **First Round Impacts** include both direct and indirect impacts. Direct impacts are those benefits associated with on-airport businesses and government tenants. Indirect impacts generally take place off-airport and are usually attributable to visitor spending.

- **Second Round Impacts** consist of induced impacts, which are those benefits that result from the recirculation and re-spendings of direct and indirect impacts within the economy. This re-circulation is commonly referred to as the “multiplier effect.”

- **Total Impacts** are the combination of all first-round and second-round impacts.
