Four K-10 Bridges Scheduled to Reopen in Johnson County

On Thursday, October 23, a repair project on the westbound K-10 bridge spanning Edgerton Road and on the eastbound K-10 bridge spanning Mill Creek in Johnson County will be completed and K-10 will be reopened to all traffic by 4:00 p.m. the same day, weather permitting. Then on Friday, October 24, the two eastbound K-10 bridges spanning over Cedar Creek and Camp Creek in Johnson County will be completed and K-10 will be reopened to all traffic by 4:00 p.m. the same day, weather permitting.

In early August, a repair project began on the two eastbound bridges spanning Cedar Creek and Camp Creek (located approximately one mile west of Cedar Creek Road) and the westbound bridge spanning Edgerton Road. Then in mid-August, a repair project began on the eastbound bridge spanning the BNSF railroad tracks (located approximately 2.5 miles east of K-7)/Mill Creek. For each bridge, crews completed pavement repairs on the bridge decks and then applied an overlay over the entire bridge deck. During the repair projects, K-10 traffic was reduced to one lane across each bridge.

Comanche Construction Company was the primary contractor on the bridge repair projects. For questions or additional information on these bridge repair projects, please contact Kimberly Qualls, Northeast Kansas Public Affairs Manager, at (785) 640-9340, or Jason Van Nice, Lawrence Construction Engineer, at (785) 842-0299.
